

The Challenge

Build an AI-assisted, task-based experience that interprets common member benefit questions and guides members to a structured answer paired with a clear next step. Some suggestions are: find a doctor, see what's covered, view ID card, check claims or statements, contact a provider, and more!

Objectives

Your mission is to develop an AI-powered solution that will:

- Interprets a member question
- Returns a clear, structured answer
- Connects directly to the next action a member can take

Key Focus Areas

- Improves benefit clarity and reduces friction in key member moments
- Increases task completion and appropriate use of benefits
- Reduces avoidable customer support (CE / PI) inquiries
- Establishes a reusable interaction pattern across app, web and member experiences, with potential for client-specific customization
 - Can be built on current content and improved over time as information architecture (IA) and content evolve, without reworking the experience layer.
- Improves member satisfaction and retention
- Strengthens client value perception by making benefits easier to understand and use
- Creates operational efficiency
- Embrace Innovation: Applies AI to core digital experiences to improve how members interact with their benefits
- Prioritize Our People: Reduces effort for both members and internal teams
